Education

Georgia Institute of Technology — Atlanta, Georgia
Master of Science in Computer Science: Artificial Intelligence — *Expected December 2027*

Georgia Institute of Technology — Atlanta, Georgia
Bachelor of Science in Computer Science - GPA: 3.65/4.00 — *May 2026*

- **Coursework:** Deep Learning, Machine Learning, Intro to AI, Design & Analysis-Algorithms, Computer Organization & Programming, Data Structures & Algorithms, Object-Oriented Programming, Human-Centered Computing/Design

Experience & Research

Software Engineer Intern — May 2025 - September 2025
Florida Department of Commerce — *Tallahassee, Florida*

- Automated SQL data retrieval for daily spreadsheets used in team meetings to track completed work, unresolved issues, and project status, reducing preparation time by **50–75%** and saving **30–45 minutes** per day
- Developed Oracle SQL queries retrieving claimant records for information requests, cutting ticket-processing time by **40%**

Undergraduate Researcher — August 2024 - December 2025
Georgia Institute of Technology — *Atlanta, Georgia*

- Led the finance research group in developing reinforcement learning (DQN and DDPG) portfolio-management models with Python and TensorFlow, incorporating indicators, experience replay, target networks, and cost-aware reward functions
- Improved simulated returns by **7%** vs. a market-long baseline with DQN and cut portfolio volatility **30%** using DDPG
- Independently evaluated Ridge, gradient-boosted trees, and a PyTorch neural network for QQQ options across **9 model fits** and **18** simulated accounts; recorded a **7.96%** average simulated return across accounts

Software Engineer Intern — May 2024 - September 2024
AMG Invest — *Houston, Texas*

- Developed and deployed investment dashboards (Next.js/React) for **100+** traded stocks, enabling investors to run trading algorithms, review results, and monitor performance; automated application updates and deployments via CI/CD pipelines
- Created custom interactive D3.js and Highcharts.js visualizations to showcase data from investor-provided endpoints, displaying stock performance, algorithm outputs, and trading results across application pages
- Integrated client-provided REST API endpoints for stock and algorithm data; reduced retrieval and loading time by **17.5%**

Software Engineer Intern — May 2023 - August 2023
AMG Invest — *Houston, Texas*

- Led the design and development of a full-stack Next.js/React application with an interactive UI for **15+** investors, enabling execution of trading algorithms, results analysis, and performance tracking; deployed the application on AWS Amplify
- Implemented authentication and user management with NextAuth.js, Prisma, and MongoDB; integrated AWS Lambda, S3, and DynamoDB to store and retrieve investor data for the application's trading workflows

Projects

Machine Learning for Poker Opponent Modeling | *Python, Node.js, LightGBM, Playwright, XGBoost, CatBoost* — GitHub | Paper

- Built a poker hand/game state analysis pipeline using regret-minimization policies (CFR/DCFR) to evaluate legal actions
- Trained and combined **9** supervised models on **5M+** decisions to predict opponent actions from player statistics and hands
- Achieved **67.37%** postflop action-prediction accuracy and **65.73%** accuracy in multiway hands with multiple opponents

Prompt Compression for Sentiment Classification | *PyTorch, DistilBERT, Hugging Face Transformers, scikit-learn* — GitHub | Paper

- Rebuilt a DistilBERT (transformer) sentiment-classification pipeline on **56k** SST-2 examples, comparing random, inverse document frequency (IDF), and learned prompt compression to shorten example text and classify movie reviews faster
- Cut input tokens **28.6%** and GPU pipeline time **48.8%** vs. full prompts at **90.9%** accuracy using cached IDF compression

StackHUD - Poker Analytics Platform | *TypeScript, Next.js, React, Prisma, Fastify, Node.js, PostgreSQL, Firebase* — Live Site

- Created a full stack poker analytics platform for **1,000+** registered users, generating **$2K–$3K/mo** in subscription revenue
- Built a resumable data-import (ETL) pipeline processing **400K+** hands and **5.5M+** actions into searchable game histories

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks & Libraries: React, Next.js, Node.js, Fastify, PyTorch, TensorFlow, scikit-learn, Transformers, Pandas, NumPy
Databases, Cloud & Tools: PostgreSQL, MongoDB, Oracle, Prisma, Firebase, AWS, DigitalOcean, Git, Docker, Playwright
